

June 13, 1931.

Mr. George M. Bacon,
State Engineer,
Salt Lake City, Utah.

Dear Mr. Bacon:

I have been considerably disturbed this year because the water in the Montez Creek is all being used above my point of diversion in connection with No. _____, my filing is third in priority and there has been water in excess of the amount due to the two prior filings all along.

I believe that Ben G. Dye and Sam Snyder have been diverting an average of 6 c.f.s. between them and Mathew Zager and Deon Spencer have been diverting water above and I am of the opinion that they haven't a filing at all. I have just interviewed the Dry Gulch Company to see if they were interested in getting a commissioner and was gratified to learn that they have already written you requesting that a Commissioner be appointed.

I would suggest that if arrangements could be made with B. O. Colton that he be appointed Commissioner and Mr. Colton in turn can appoint Clair Haslem his deputy. Clair Haslem is riding ditch for the Uintah Project and in making his ride crosses the Montez Creek several times each day.

I would like very much to see immediate action taken.

Very truly yours,

Albert Rasmussen
